Docket No. 740756-2710

Application No. 10/771,277

Page 2

IN THE CLAIMS:

1. (Currently Amended) A manufacturing method of a display device comprising:
selectively forming a pattern comprising a composition which is emitted by use of
droplet emitting means; [[and]]

baking the pattern; and

carrying out plasma processing to the baked pattern by use of atmospheric plasma
processing means,

wherein the droplet emitting means comprises a droplet emitting head in which a
plurality of droplet emitting holes are disposed in a line form, and

wherein the atmospheric plasma processing means comprises plasma generating
means under atmospheric pressure or vicinity of atmospheric pressure.

2. (Currently Amended) A manufacturing method of a display device comprising:

selectively forming a wiring by use of droplet emitting means;

selectively forming a resist and a wiring by use of droplet emitting means, over the
wiring; and

etching the wiring by use of atmospheric plasma;

ashing the resist ~~and etching the wiring~~ by use of atmospheric plasma processing
means after etching the wiring,

wherein the droplet emitting means comprises a droplet emitting head in which a
plurality of droplet emitting holes are disposed in a line form, and

wherein the atmospheric plasma processing means comprises plasma generating
means under atmospheric pressure or vicinity of atmospheric pressure.

3. (Currently Amended) A manufacturing method of a display device comprising:

selectively forming a resist by use of droplet emitting means; and

baking the resist;

etching an electric conductive film which is disposed under the baked resist by use
of atmospheric plasma processing means;

ashing the baked resist ~~and etching an electric conductive film which is disposed~~
~~under the resist~~ by use of atmospheric plasma processing means,

wherein the droplet emitting means comprises a droplet emitting head in which a plurality of droplet emitting holes are disposed in a line form, and

wherein the atmospheric plasma processing means comprises plasma generating means under atmospheric pressure or vicinity of atmospheric pressure.

4. (Currently Amended) A manufacturing method of a display device comprising:
selectively forming a pattern comprising a composition which is emitted by use of droplet emitting means, and

baking the pattern;

carrying out plasma processing to the baked pattern by use of plasma processing means for carrying out local plasma processing,

wherein the droplet emitting means comprises a droplet emitting head in which one or a plurality of droplet emitting holes are disposed, and

wherein the plasma processing means for carrying out local plasma processing comprises plasma generating means under atmospheric pressure or the vicinity of atmospheric pressure.

5. (Currently Amended) A manufacturing method of a display device comprising:

selectively forming a wiring by use of droplet emitting means;

selectively forming a resist and a wiring by use of droplet emitting means, over the wiring; [[and]]

etching the wiring by use of atmospheric plasma for carrying out local plasma processing; and

ashing the resist and etching the wiring by use of plasma processing means for carrying out local plasma processing, after etching the wiring,

wherein the droplet emitting means comprises a droplet emitting head in which one or a plurality of droplet emitting holes are disposed, and

wherein the plasma processing means for carrying out local plasma processing comprises plasma generating means under atmospheric pressure or the vicinity of atmospheric pressure.

6. (Currently Amended) A manufacturing method of a display device comprising:
selectively forming a wiring;
selectively forming a resist by use of a droplet emitting means, over the wiring; and
etching the wiring by use of plasma processing means for carrying out local plasma
processing;

ashing the resist ~~and etching a wiring~~ by use of plasma processing means for
carrying out local plasma processing, after etching the wiring,

wherein the droplet emitting means comprises a droplet emitting head in which one
or a plurality of droplet emitting holes are disposed, and

wherein the plasma processing means for carrying out local plasma processing
comprises plasma generating means under atmospheric pressure or the vicinity of
atmospheric pressure.

7. (Previously Presented) A manufacturing method of a display device according to
claim 1, wherein the droplet comprises any one of a photosensitive resist, a paste form metal
material or organic liquid solution which includes the paste form metal, a ultra-fine particle
form metal material or organic liquid solution which includes the metal material.

8-9. (Canceled)

10. (Currently Amended) A manufacturing method of a display device comprising:
forming a groove in an insulating film formed on a glass substrate;
emitting a ~~composition~~ wiring material in the groove, by use of droplet emitting
means[[: and]] to form a wiring in the groove.

~~forming a pattern comprising the composition along the groove, for use as a wiring,~~
wherein the droplet emitting means comprises a droplet emitting head in which a
plurality of droplet emitting holes are disposed in a line form, and
wherein the droplet emitting head moves along the groove when emitting the wiring
material.

11. (Currently Amended) A manufacturing method of a display device comprising:
forming a groove in an insulating film formed on a glass substrate;
emitting a ~~composition~~ wiring material in the groove, by use of droplet emitting means[[: and]] to form a wiring in the groove;
~~forming a pattern comprising the composition along the groove, to thereby form a wiring;~~
wherein the droplet emitting means comprises a droplet emitting head in which one or a plurality of droplet emitting holes are disposed in a line form, and
wherein the droplet emitting head moves along the groove when emitting the wiring material.

12-13. (Canceled)

14. (Previously Presented) A manufacturing method of a display device comprising:
selectively forming an electric conductive film, which becomes a wiring, on a substrate, by emitting a composition by use of droplet emitting means,
forming a resist pattern by emitting a resist on the electric conductive film by use of the droplet emitting means,
etching the electric conductive film with the resist pattern as a mask, by use of plasma processing means, and
ashing the resist pattern by use of the plasma processing means, to form a wiring,
wherein the droplet emitting means comprises a droplet emitting head in which a plurality of droplet emitting holes are disposed in a line form, and
wherein the plasma processing means comprises plasma generating means under atmospheric pressure or the vicinity of atmospheric pressure.

15. (Previously Presented) A manufacturing method of a display device comprising:
selectively forming an electric conductive film, which becomes a wiring, on a substrate, by emitting a composition by use of droplet emitting means,
forming a resist pattern by emitting a resist on the electric conductive film by use of the droplet emitting means,

etching the electric conductive film with the resist pattern as a mask, by use of plasma processing means, and

ashing the resist pattern by use of the plasma processing means, to form a wiring, wherein the droplet emitting means comprises a droplet emitting head in which one or a plurality of droplet emitting holes are disposed in a line form, and

wherein the plasma processing means comprises plasma generating means under atmospheric pressure or the vicinity of atmospheric pressure for carrying out local plasma processing.

16. (Previously Presented) A manufacturing method of a display device according to claim 1, wherein the droplet comprises any one of a photosensitive resist, a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

17. (Previously Presented) A manufacturing method of a display device according to claim 2, wherein the droplet for the resist comprises a photosensitive resist, and the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

18. (Previously Presented) A manufacturing method of a display device according to claim 3, wherein the droplet for the resist comprises a photosensitive resist.

19. (Previously Presented) A manufacturing method of a display device according to claim 4, wherein the droplet comprises any one of a photosensitive resist, a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

20. (Previously Presented) A manufacturing method of a display device according to claim 5, wherein the droplet for the resist comprises a photosensitive resist, and the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution

which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

21. (Previously Presented) A manufacturing method of a display device according to claim 6, wherein the droplet for the resist comprises a photosensitive resist.

22. (Canceled)

23. (Previously Presented) A manufacturing method of a display device according to claim 10, wherein the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

24. (Previously Presented) A manufacturing method of a display device according to claim 11, wherein the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

25-26. (Canceled)

27. (Previously Presented) A manufacturing method of a display device according to claim 14, wherein the droplet for the resist pattern comprises a photosensitive resist, and the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.

28. (Previously Presented) A manufacturing method of a display device according to claim 15, wherein the droplet for the resist pattern comprises a photosensitive resist, and the droplet for the wiring comprises any one of a paste form metal material or organic liquid solution which includes the paste form metal, a ultra-fine particle form metal material or organic liquid solution which includes the metal material.
